# Chapter 1

## Namespace Index

### 1.1 Namespace List

Here is a list of all namespaces with brief descriptions:

<a href="#">ShapeLib</a> . . . . .	9
------------------------------------	---

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Point . . . . .	11
ShapeLib::Shape . . . . .	20
ShapeLib::Rectangle . . . . .	14

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Point</a>	Simple class representing one point in cartesian coordinates . . . . .	<a href="#">11</a>
<a href="#">ShapeLib::Rectangle</a>	Simple class representing a rectangle defined by two points . . . . .	<a href="#">14</a>
<a href="#">ShapeLib::Shape</a>	. . . . .	<a href="#">20</a>

## Chapter 4

# File Index

### 4.1 File List

Here is a list of all files with brief descriptions:

/Users/peterjanku/SourcesCpp/AK5PC_Shape2D/ShapeLib/include/ <a href="#">point.h</a>	23
/Users/peterjanku/SourcesCpp/AK5PC_Shape2D/ShapeLib/include/ <a href="#">rectangle.h</a>	23
/Users/peterjanku/SourcesCpp/AK5PC_Shape2D/ShapeLib/include/ <a href="#">shape.h</a>	25
/Users/peterjanku/SourcesCpp/AK5PC_Shape2D/ShapeLib/src/ <a href="#">point.cpp</a>	25
/Users/peterjanku/SourcesCpp/AK5PC_Shape2D/ShapeLib/src/ <a href="#">rectangle.cpp</a>	26
/Users/peterjanku/SourcesCpp/AK5PC_Shape2D/ShapeLib/src/ <a href="#">shape.cpp</a>	27

## Chapter 5

# Namespace Documentation

## 5.1 ShapeLib Namespace Reference

### Classes

- class [Rectangle](#)  
*Simple class representing a rectangle defined by two points.*
- class [Shape](#)

### Functions

- `std::ostream & operator<< (std::ostream &stream, Rectangle &rect)`

### 5.1.1 Function Documentation

#### 5.1.1.1 `operator<<()`

```
std::ostream & ShapeLib::operator<< (  
    std::ostream & stream,  
    ShapeLib::Rectangle & rect )
```

Definition at line [42](#) of file [rectangle.cpp](#).

## Chapter 6

# Class Documentation

### 6.1 Point Class Reference

Simple class representing one point in cartesian coordinates.

```
#include <point.h>
```

#### Public Member Functions

- [Point](#) (int [x](#), int [y](#))  
*First parametric constructor.*

#### Static Public Member Functions

- static int [horizontalDistance](#) (const [Point](#) &p1, const [Point](#) &p2)  
*Static function for horizontal distance of two point estimation.*
- static int [verticalDistance](#) (const [Point](#) &p1, const [Point](#) &p2)  
*Static function for vertical distance of two point estimation.*

#### Public Attributes

- int [x](#)
- int [y](#)

#### 6.1.1 Detailed Description

Simple class representing one point in cartesian coordinates.

Definition at line [11](#) of file [point.h](#).

#### 6.1.2 Constructor & Destructor Documentation

### 6.1.2.1 Point()

```
Point::Point (
    int x,
    int y ) [inline]
```

First parametric constructor.

Because at least one parametric constructor is created, the compiler doesn't create the default constructor.

## Parameters

<i>x</i>	coordinate
<i>y</i>	coordinate

Definition at line 21 of file [point.h](#).

### 6.1.3 Member Function Documentation

#### 6.1.3.1 horizontalDistance()

```
int Point::horizontalDistance (
    const Point & p1,
    const Point & p2 ) [static]
```

Static function for horizontal distance of two point estimation.

See also

[Point](#)

## Parameters

<i>p1</i>	first input point
<i>p2</i>	second input point

## Returns

horizontal distance between provided pints

Definition at line 14 of file [point.cpp](#).

#### 6.1.3.2 verticalDistance()

```
int Point::verticalDistance (
    const Point & p1,
    const Point & p2 ) [static]
```

Static function for vertical distance of two point estimation.

See also

[Point](#)

**Parameters**

<i>p1</i>	first input point
<i>p2</i>	second input point

**Returns**

vertical distance between provided points

Definition at line 24 of file [point.cpp](#).

## 6.1.4 Member Data Documentation

### 6.1.4.1 x

```
int Point::x
```

coordinate X

Definition at line 26 of file [point.h](#).

### 6.1.4.2 y

```
int Point::y
```

coordinate Y

Definition at line 27 of file [point.h](#).

The documentation for this class was generated from the following files:

- [/Users/peterjanku/SourcesCpp/AK5PC\\_Shape2D/ShapeLib/include/point.h](#)
- [/Users/peterjanku/SourcesCpp/AK5PC\\_Shape2D/ShapeLib/src/point.cpp](#)

## 6.2 ShapeLib::Rectangle Class Reference

Simple class representing a rectangle defined by two points.

```
#include <rectangle.h>
```

Inheritance diagram for ShapeLib::Rectangle:

## Public Member Functions

- [Rectangle](#) (int id, int x1, int y1, int x2, int y2)  
*The rectangle constructor.*
- [Rectangle](#) (int id, const [Point](#) &p1, const [Point](#) &p2)  
*The main rectangle constructor.*
- void [printInfo](#) () const override
- int [getWidth](#) ()  
*This function returns the current width of the rectangle. If the already calculated width is incorrect(the rectangle points were redefined), the dimensions are recalculated at first.*
- int [getHeight](#) ()  
*This function returns the current height of the rectangle. If the already calculated height is incorrect(the rectangle points were redefined), the dimensions are recalculated at first.*
- const [Point](#) & [getP1](#) () const  
*Return the first point in 2D space, which defines the rectangle.*
- const [Point](#) & [getP2](#) () const  
*Return the second point in 2D space, which defines the rectangle.*

## Protected Member Functions

- void [recalculateDim](#) ()

## Protected Attributes

- [Point](#) p1
- [Point](#) p2
- int [width](#)
- int [height](#)
- bool [dimValid](#) = false

### 6.2.1 Detailed Description

Simple class representing a rectangle defined by two points.

See also

[Point](#)

Definition at line 16 of file [rectangle.h](#).

### 6.2.2 Constructor & Destructor Documentation

#### 6.2.2.1 Rectangle() [1/2]

```
ShapeLib::Rectangle::Rectangle (
    int id,
    int x1,
    int y1,
    int x2,
    int y2 ) [inline]
```

The rectangle constructor.

This constructor is calling the second one with modified parameters. This can be done since C++11 standard and it's called constructor delegation.

## Parameters

<i>id</i>	<a href="#">Rectangle</a> ID
<i>x1</i>	X coordinate of first rectangle's point
<i>y1</i>	Y coordinate of first rectangle's point
<i>x2</i>	X coordinate of second rectangle's point
<i>y2</i>	Y coordinate of second rectangle's point

Definition at line 29 of file [rectangle.h](#).

### 6.2.2.2 [Rectangle\(\)](#) [2/2]

```
ShapeLib::Rectangle::Rectangle (
    int id,
    const Point & p1,
    const Point & p2 ) [inline]
```

The main rectangle constructor.

This constructor stores all [Rectangle](#)'s internal members as well as members defined in [Shape](#) class. It also calls constructor of [Shape](#) class. Finally, it recalculates the value dimensions of the rectangle.

See also

[recalculateDim\(\)](#)

## Parameters

<i>id</i>	
<i>p1</i>	
<i>p2</i>	

Definition at line 40 of file [rectangle.h](#).

## 6.2.3 Member Function Documentation

### 6.2.3.1 [getHeight\(\)](#)

```
int ShapeLib::Rectangle::getHeight ( )
```

This function returns the current height of the rectangle. If the already calculated height is incorrect(the rectangle points were redefined), the dimensions are recalculated at first.

See also

[recalculateDim\(\)](#)

Returns

current height of the rectangle.

Definition at line 23 of file [rectangle.cpp](#).

### 6.2.3.2 getP1()

```
const Point & ShapeLib::Rectangle::getP1 ( ) const [inline]
```

Return the first point in 2D space, which defines the rectangle.

Returns

Const reference to the point

See also

[Point](#)

Definition at line 52 of file [rectangle.h](#).

### 6.2.3.3 getP2()

```
const Point & ShapeLib::Rectangle::getP2 ( ) const [inline]
```

Return the second point in 2D space, which defines the rectangle.

Returns

Const reference to the point

See also

[Point](#)

Definition at line 58 of file [rectangle.h](#).

#### 6.2.3.4 getWidth()

```
int ShapeLib::Rectangle::getWidth ( )
```

This function returns the current width of the rectangle. If the already calculated width is incorrect (the rectangle points were redefined), the dimensions are recalculated at first.

See also

[recalculateDim\(\)](#)

Returns

current width of the rectangle.

Definition at line 12 of file [rectangle.cpp](#).

#### 6.2.3.5 printInfo()

```
void ShapeLib::Rectangle::printInfo ( ) const [override], [virtual]
```

Implements [ShapeLib::Shape](#).

Definition at line 36 of file [rectangle.cpp](#).

#### 6.2.3.6 recalculateDim()

```
void ShapeLib::Rectangle::recalculateDim ( ) [protected]
```

Definition at line 30 of file [rectangle.cpp](#).

### 6.2.4 Member Data Documentation

#### 6.2.4.1 dimValid

```
bool ShapeLib::Rectangle::dimValid = false [mutable], [protected]
```

Information if width and height is correct or not.

See also

[recalculateDim\(\)](#)

Definition at line 68 of file [rectangle.h](#).

#### 6.2.4.2 height

```
int ShapeLib::Rectangle::height [mutable], [protected]
```

Temporary storage of rectangle height. Don't have to be correct!!!!

See also

[dimValic](#)

Definition at line 67 of file [rectangle.h](#).

#### 6.2.4.3 p1

```
Point ShapeLib::Rectangle::p1 [protected]
```

The first point in 2D space

Definition at line 64 of file [rectangle.h](#).

#### 6.2.4.4 p2

```
Point ShapeLib::Rectangle::p2 [protected]
```

The second point in 2D space

Definition at line 65 of file [rectangle.h](#).

#### 6.2.4.5 width

```
int ShapeLib::Rectangle::width [mutable], [protected]
```

Temporary storage of rectangle width. Don't have to be correct!!!!

See also

[dimValid](#)

Definition at line 66 of file [rectangle.h](#).

The documentation for this class was generated from the following files:

- [/Users/peterjanku/SourcesCpp/AK5PC\\_Shape2D/ShapeLib/include/rectangle.h](#)
- [/Users/peterjanku/SourcesCpp/AK5PC\\_Shape2D/ShapeLib/src/rectangle.cpp](#)

## 6.3 ShapeLib::Shape Class Reference

```
#include <shape.h>
```

Inheritance diagram for ShapeLib::Shape:

### Public Member Functions

- [Shape](#) (int id)
- virtual void [printInfo](#) () const =0
- int [getID](#) () const

### Protected Attributes

- int [ID](#)

### 6.3.1 Detailed Description

Definition at line 12 of file [shape.h](#).

### 6.3.2 Constructor & Destructor Documentation

#### 6.3.2.1 Shape()

```
ShapeLib::Shape::Shape (  
    int id ) [inline], [explicit]
```

Definition at line 14 of file [shape.h](#).

### 6.3.3 Member Function Documentation

#### 6.3.3.1 getID()

```
int ShapeLib::Shape::getID ( ) const [inline]
```

Definition at line 18 of file [shape.h](#).

#### 6.3.3.2 printInfo()

```
virtual void ShapeLib::Shape::printInfo ( ) const [pure virtual]
```

Implemented in [ShapeLib::Rectangle](#).

### 6.3.4 Member Data Documentation

#### 6.3.4.1 ID

```
int ShapeLib::Shape::ID [protected]
```

Definition at line 21 of file [shape.h](#).

The documentation for this class was generated from the following file:

- [/Users/peterjanku/SourcesCpp/AK5PC\\_Shape2D/ShapeLib/include/shape.h](#)
